

## REMOTE CCTV CAMERA MONITORING SERVICES

---

The remote monitoring services highlight the importance of the term "Prevention" to GKS Kernel. Through a process in which our skilled Human Resources make the most of the potential of technological development to protect the property of its clients.

The **GKS Kernel Security** main station has a specially designed area, which provides a high level of security and equipment for uninterrupted live view. It is a system of remote camera surveillance and monitoring through internet.

In the event that a possible intruder is detected, a special electronic management system activates sirens and simultaneously opens internal and external lighting, creating panic in the area. The whole process is de-escalated upon the removal of the intruder.
